ALL PROCEEDS TO BENEFIT NF RESEARCH

Neurofibromatosis (NF) is a highly variable and progressive disorder that can cause tumors to grow on the nerves anywhere at any time along with a host of other problems. While not all NF patients suffer from the most severe symptoms, all live with the uncertainty of whether they will some day be severely affected.

Pass the word!

Neuro*fibroma*tosis

Lot's of syllables! Lots of problems!

Please Care!

.....Cash bar and raffles.....

email Vikki @ vmedlik@sbcglobal.net for tickets and more information
